Bo Zhu

2027 Graduate Recruitment / Search, Ads, Recommendation & LLM Algorithms

18883609730 / zhub_007@163.com

EDUCATION

Sun Yat-sen University / M.Eng. in Computer Technology / Sep 2024 - Jun 2027 (expected)

Jilin University / B.Eng. in Software Engineering / Sep 2020 - Jun 2024

RESEARCH INTERESTS

Neuro-symbolic methods for improving LLM reasoning, including neural-symbolic integration, symbolic process supervision, verification, and generalization.

INDUSTRY EXPERIENCE

Tencent / Weixin, WXG

Recommendation Algorithm Intern / May 2026 - Present

Live-commerce recommendation, with online A/B experiments on retrieval coverage, cross-domain features, U2I models, and long-sequence features.

- **Retrieval coverage:** Added meaningful-viewing retrieval using views of at least 30 seconds as positives: live-card payment GMV +8.60% and meaningful-viewing UV +2.88%. Built embedding I2I from the latest five meaningful room-entry behaviors: payment orders +1.30% and GMV +1.10%.
- **Cross-domain signals:** Designed a neural mapping layer to stabilize video-channel user embeddings before integrating them into retrieval. Live-card UCTR +0.23%; payment UV among highly active video-channel users +0.87%.
- **U2I modeling:** Unified purchase, product-click, and meaningful-viewing retrieval configurations, expanded the purchase-channel embedding from 32 to 64 dimensions, and introduced SENet feature gating. Live-card payment UV +1.85% and GMV +2.53%.
- **Long-sequence features:** Added five behavior sequences with side information, covering product clicks, room entry, 10/30-second viewing, and cross-domain purchases. Replaced sequence pooling with attention pooling. Overall payment GMV +1.59%; live-payment users +0.44%.

Tencent / Yuanbao, CSIG

Recommendation Algorithm Intern / Dec 2025 - May 2026

LLM content selection and recommendation for homepage cards and push notifications, with attention to long-term user feedback.

- **Group-level LLM content selection:** Used LightGBM to route users into disjoint groups. An LLM selected content and generated copy offline for each scenario/group, followed by exposure filtering and random delivery. Against random selection, homepage CTR +8.3%; in push experiments, messaging days per user +1.2% and 7-day retention +0.5%.
- **Multi-task ranking:** Built an MMoE model for click and 7-day retention prediction, using user, content, and cross features with a joint ranking score.
- **Push opt-out risk:** Used LightGBM feature analysis and a DESCN uplift model to distinguish baseline notification opt-out propensity from the incremental effect of push delivery.
- **Retention indicators:** Screened retention proxies using lead-lag correlation, trend agreement, and minimum detectable effect (MDE) for early warnings and A/B evaluation.

INDUSTRY EXPERIENCE / CONTINUED

NetEase / AI Lab, CodeMaker

NLP Algorithm Intern / Jun 2025 - Nov 2025

Repository-level code completion under cross-file dependency and low-latency constraints.

- **RAG evaluation:** Used AST-based function/class chunking and completion-position sampling to compare keyword, embedding, hybrid retrieval, and chunking strategies. Evaluated exact match (EM), edit similarity, and Jaccard similarity. BM25 RAG improved online acceptance by 5.9 percentage points (pp) over no RAG.
- **Cross-file retrieval and embedding training:** Built reference-to-gold-definition examples and measured Accuracy@k. Fine-tuned embeddings with InfoNCE and ordinary/import-scoped hard negatives. On selected internal code repositories, compared with BM25: EM +20.1 pp, edit similarity +12.3 pp, and online acceptance +3.4 pp.

iFLYTEK / South China AI Research Institute

Research Algorithm Engineer / Mar 2025 - Jun 2025

Mental-health dialogue models for crisis-risk assessment and user-profile generation.

- **Crisis-risk assessment:** Combined synthetic data, model filtering, and counselor review. Applied SFT to a Qwen3 base model, followed by GRPO to improve context-consistent explanations. Accuracy +9.3%; F1 +27.0%.
- **Profile generation:** Separated label prediction from open-ended profiles. Used structured outputs, reference filtering, SFT, and GRPO to reduce hallucination. In counselor sampling, hallucination rate -60%; reasonableness improved from 3.2 to 4.1 and usefulness from 3.0 to 4.0 on 5-point scales.

SELECTED PROJECTS

Visual-Language Named Entity Recognition

Project Lead / National Undergraduate Innovation and Entrepreneurship Training Program / Apr 2022 - Apr 2023

Explored multimodal NER using visual-language feature alignment. Led framework design, experiments, and output preparation; used ablations to assess the visual contribution. The related invention patent is under substantive examination.

UAV Data Transmission for Disaster Response

Data Processing and Paper Co-author / Sep 2022 - Mar 2024

Studied transmission optimization in UAV networks for disaster response, balancing data rate and energy consumption. Related paper: *Aerial Data Transmission under Disasters*, IEEE WCNC 2024.

ADDITIONAL OUTPUTS

One invention patent application: visual-language named entity recognition method and device (under substantive examination). Three software copyright registrations: NLP information retrieval, AI speech recognition, and machine-learning data analysis and processing systems.
